Anvay Patel

anp6897@nyu.edu • anvay.moe • github.com/AnvayDev • linkedin.com/in/anvaypatel • New York, NY

Education

New York University — New York, NY
B.S. Computer Science — Expected May 2030
Relevant coursework: Calculus I, Intro to Problem Solving

Eastside Catholic School — Seattle, WA
Awards and Honors: Second Honors, AP Scholar w/ Distinction — June 2026
Relevant Coursework: AP Computer Science A, AP Macroeconomics, AP Statistics

Experience

Junior Development Intern • Splore AI (Acquired by ModelML), Singapore *July-August 2025*

- Architected and deployed a containerized RAG pipeline using Docker, FastAPI, and MySQL connecting LLMs to live portfolio data, giving asset managers natural-language access to detailed statistics
- Benchmarked 3 styles of LLMs on accuracy and cost to select the production model, based on the best accuracy to cost tradeoff from a custom data set
- Built Matplotlib-based tooling alongside the pipeline, automating recurring charts for managers and used Swagger to document the FastAPI endpoints powering each tool

Instructor • Sail Sand Point, Seattle, WA *June-July 2024*

- Instructed 35 teens across a range of skill levels and backgrounds, adapting coaching style per individual comfort level
- Led over 10 educational sessions on sailing technique and safety over the season
- Integrated hands-on technique into lessons (e.g. knot-tying) to reinforce retention for newcomers

Assistant Ski Instructor • PowderPigs, Snoqualmie, WA *January-February 2024*

- Instructed 15 children (ages 6-13) in small-group ski lessons, mentoring beginner and advanced skiers over an 8-week season
- Communicated weekly progress and safety updates to over 12 families, supporting the program's personalized instruction model

Projects

Macro Placement Challenge *Python, PyTorch, NumPy*

- Built a simulated-annealing macro placer algorithm that jointly optimizes wirelength, overlap, density, and congestion within an elliptical boundary formulation for Hudson River Trading's Macro Placement Challenge
- Achieved 1.27 proxy cost on the ibm01 benchmark, evaluated under the TILOS MacroPlacement framework used in academic EDA placement research

Clothing Classification CNN Model *Python, PyTorch, torchvision*

- Built and trained a convolutional neural network for clothing classification using PyTorch on a dataset of 300,000 images across 7 classifications
- Achieved 99 percent accuracy on a held-out test set via transfer learning

Skills

Languages: Python, Java, SQL
Backend/Infra: FastAPI, Spring Boot, OpenWebUI
Architecture: Docker, MySQL, Swagger
Tools & Practices: Git, GitHub, Linux
Certifications: Univ. of Washington x CircuitStream Deep Learning Course, JPMC Forage SWE Experience
